IRFR/U1205

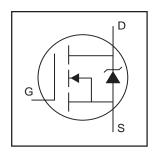

HEXFET® Power MOSFET

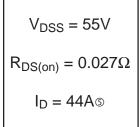

- Ultra Low On-Resistance
- Surface Mount (IRFR1205)
- Straight Lead (IRFU1205)
- Fast Switching
- Fully Avalanche Rated

Description

Fifth Generation HEXFETs from International Rectifier utilize advanced processing techniques to achieve the lowest possible on-resistance per silicon area. This benefit, combined with the fast switching speed and ruggedized device design that HEXFET Power MOSFETs are well known for, provides the designer with an extremely efficient device for use in a wide variety of applications.

The D-PAK is designed for surface mounting using vapor phase, infrared, or wave soldering techniques. The straight lead version (IRFU series) is for throughhole mounting applications. Power dissipation levels up to 1.5 watts are possible in typical surface mount applications.

Notes:

- ① Repetitive rating; pulse width limited by max. junction temperature. (See fig. 11)
- $^{\circ}$ V_{DD} = 25V, starting T_J = 25°C, L = 470μH R_G = 25Ω, I_{AS} = 25A. (See Figure 12)
- 4 Pulse width $\leq 300 \mu s$; duty cycle $\leq 2\%$.
- Calculated continuous current based on maximum allowable junction temperature; Package limitation current = 20A
- © This is applied for I-PAK, Ls of D-PAK is measured between lead and center of die contact
- ② Uses IRFZ44N data and test conditions
- ** When mounted on 1" square PCB (FR-4 or G-10 Material). For recommended footprint and soldering techniques refer to application note #AN-994
